Scipion-chem course 2026

Closing remarks

Biocomputing Unit
National Center of Biotechnology

A “Typical” Virtual Drug Screening Workflow

- It is **difficult** to define a **“typical” VDS workflow**, every project has its **own particularities**
- The **schema** here still represents just a **naive option**. Many more possibilities can be found.

How to start screening:

- **Start** with **simple “default” workflows**
- **Ask** people more **experienced**
- **Learn** about your **specific** project
- **Explore** different options.

Scipion-chem: Conclusions

- **Scipion-chem:**
  - **Accessibility:** lowers entry barrier to the use of Molecular Simulation tools
  - **Traceability**: keeps track of parameters, files and decisions
  - **Interoperability:** use different software from same platform
  - **Automation:** custom or default workflows and protocols to run
  - **Comparison**: consensus protocols to combine information from different sources
  - **Availability**: open-source code (GitHub) and open to collaborations
