Hands on: Simple VDS

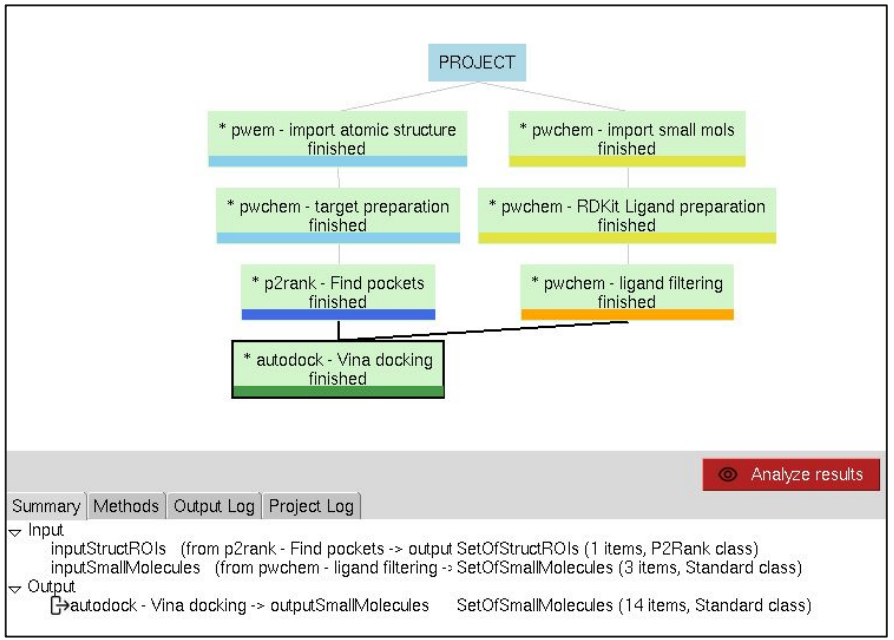

Chem

Open the project

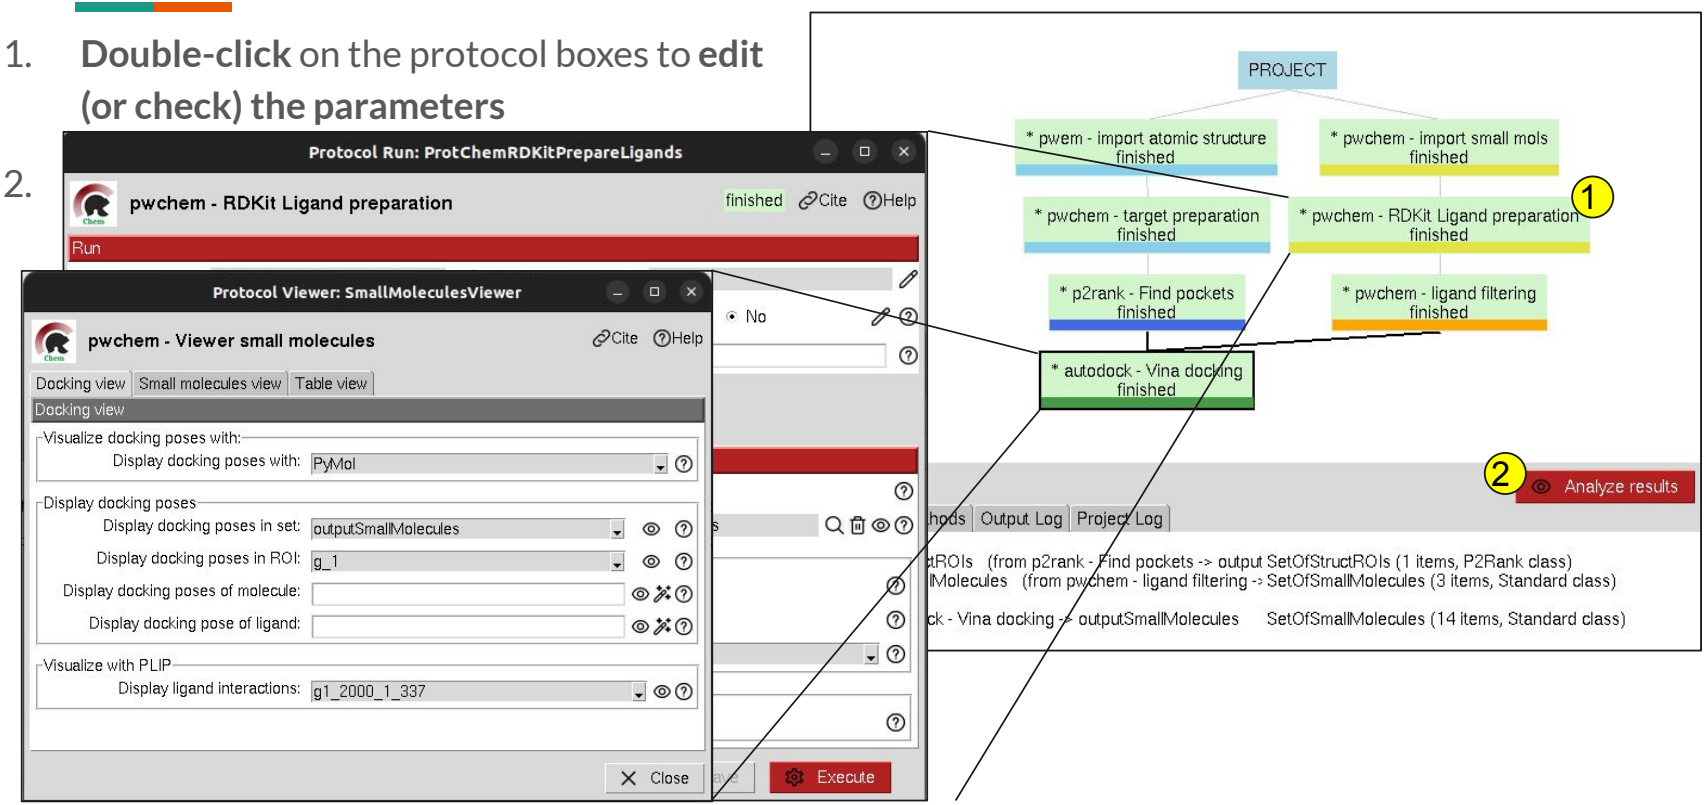

1. Open a terminal (Ctrl+Alt+T) and launch **Scipion project manager** (*$ scipion3*)
2. Open ***SimpleVDS_course*** project by clicking on it

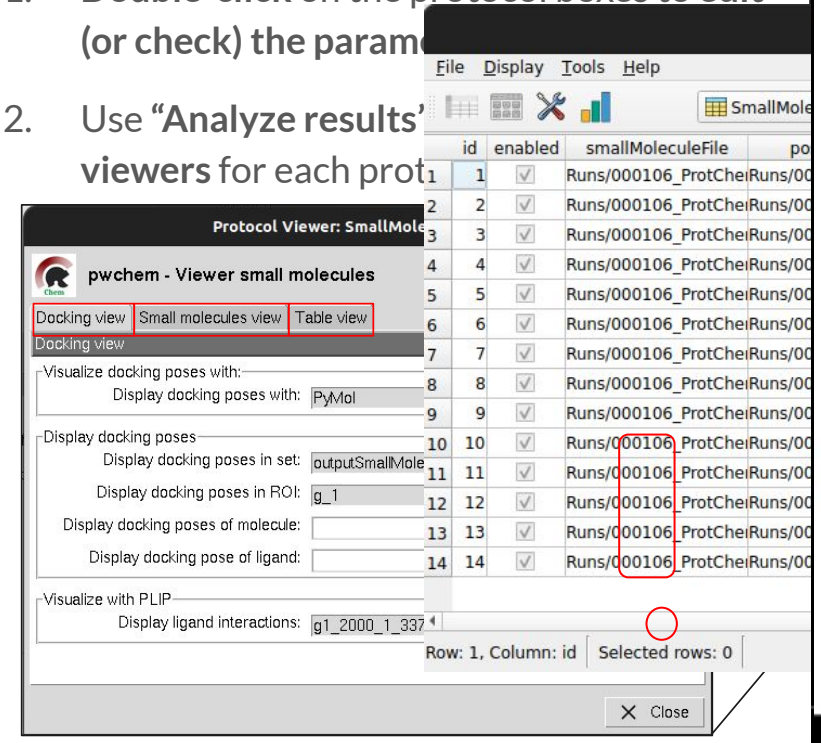

Inspect the project

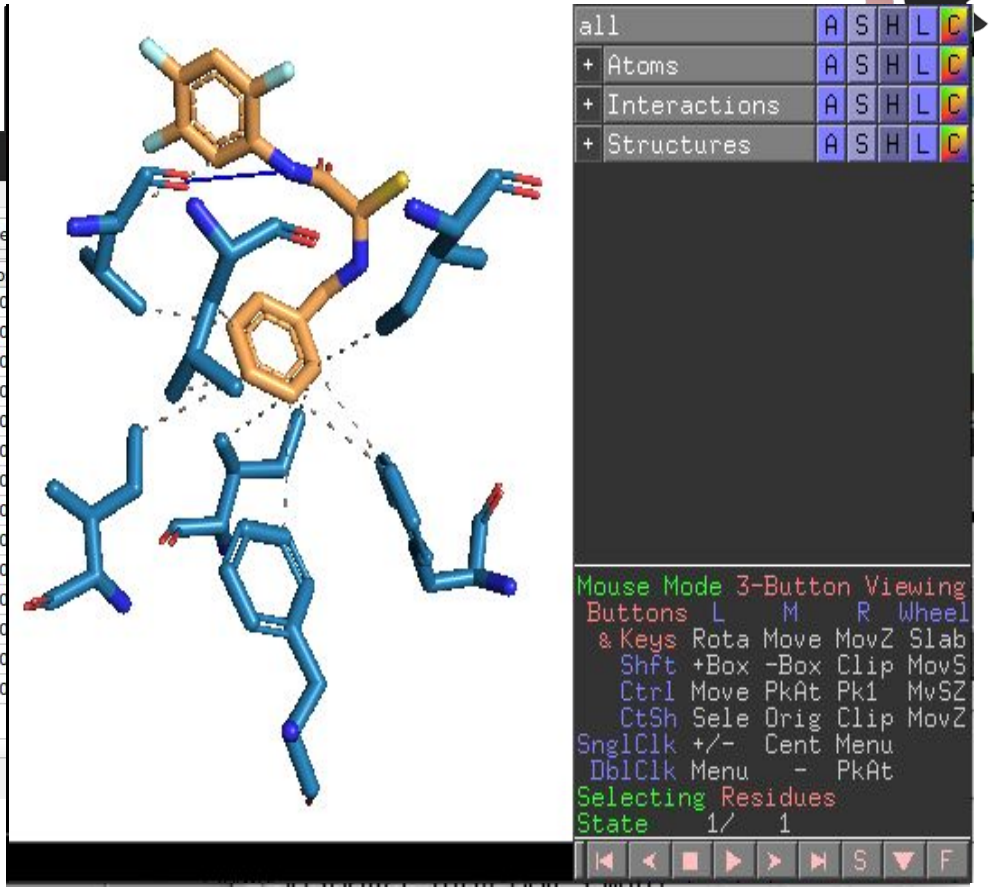

1. **Double-click** on the protocol boxes to **edit** (or check) the parameters
2.

Explore the output

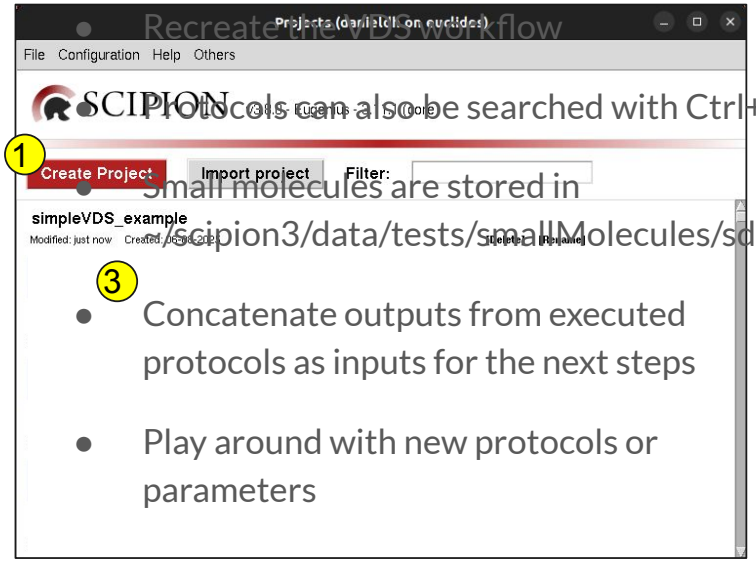

1. **Double-click** on the protocol boxes to **edit** (or check) the param
2. Use **“Analyze results’ viewers** for each prot

Create your own project

1. Click on **“Create Project”** in the **Scipion project manager** and set a name for your project
2. Set project view for **“Virtual Screening”:** VDS related protocols are now in the left panel

- Recreate the VDS workflow
- Protocols can also be searched with Ctrl+F
- Small molecules are stored in /scipion3/data/tests/smallMolecules/sdf/

3

- Concatenate outputs from executed protocols as inputs for the next steps
- Play around with new protocols or parameters
